BOCHKAR NIKHITH

+91 9959163472 | bochkarnikhith@gmail.com | Hyderabad, Telangana | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Final-year B.Tech (CSE – AI & ML) graduate with hands-on experience building AI-native full-stack applications, REST APIs, and LLM-integrated systems. Delivered production-grade web applications and AI-powered tools across multiple internships, demonstrating end-to-end ownership from architecture to deployment. Proficient in Python, TypeScript, and React with applied exposure to Generative AI, NLP pipelines, and cloud platforms. Ranked AIR ~7,000 in GATE 2026 DA paper (69,000+ candidates); proven problem-solver with a strong drive to ship high-impact, scalable solutions.

SKILLS & TECHNOLOGIES

Languages & Frameworks:	Python, Java, TypeScript, JavaScript, SQL, React, Next.js, FastAPI, SpringBoot (Beginner), REST APIs, Tailwind CSS
AI & LLM:	LLMs & Embeddings, RAG Pipelines, Prompt Engineering, Structured Outputs, Generative AI (Gemini API), NLP (spaCy, sentence-transformers), LangChain (conceptual), SHAP/LIME (XAI), Scikit-learn, Pandas, NumPy
Cloud & DevOps:	Supabase Cloud, Vercel, Google Gemini AI API, Git, GitHub, CI/CD (basic), REST API architecture
Databases:	MySQL, MongoDB, PostgreSQL (Supabase), SQLite, SQLAlchemy
Tools & Platforms:	VS Code, IntelliJ IDEA, Eclipse IDE, Streamlit, Postman, Radix UI
Core CS Concepts:	Data Structures & Algorithms, OOP, DBMS, System Design, SDLC, Agile/Scrum

PROFESSIONAL EXPERIENCE

Full-Stack Developer Intern — Sep 2025 – Dec 2025

Sofzenix IT Solutions LLP, Hyderabad (Remote)

- Architected and shipped a full-featured dance studio web application using Next.js, implementing dynamic service pages, class scheduling, trainer profiles, event listings, and an end-to-end online booking flow — directly reducing manual booking overhead for the client.
- Engineered a mobile-first, SEO-optimized UI with server-side rendering (SSR), dynamic animations, and Google Maps API integration, achieving fast load times and measurable improvement in client digital presence.
- Built and consumed RESTful APIs for event and booking data, implementing structured data flows between frontend and backend services with robust error handling and validation.
- Practiced Agile/Scrum methodology with iterative sprint delivery, collaborating directly with client stakeholders to translate business requirements into scalable, production-ready frontend components.

Industrial Trainee – QR Traceability System — May 2025 – Jul 2025

Intel® Unnati Program, Hyderabad (Remote)

- Designed and developed a QR-based digital traceability module in Next.js + TypeScript for manufacturing quality control, enabling real-time product lifecycle tracking and reducing manual logging effort by an estimated 60%.
- Built RESTful APIs for searchable audit trails and automated CSV data export, improving supply chain visibility and supporting end-to-end traceability for QA teams — a production-grade, enterprise-pattern solution.
- Implemented live QR scanning interface with batch-entry support, real-time validation feedback, and an intuitive UX using Tailwind CSS and Radix UI components — delivering an MVP within the internship timeline.
- Identified bottlenecks in the manual QC process, proposed an AI-assisted traceability solution, and owned delivery from requirements through deployment — demonstrating full-stack ownership on a real industrial use case.

Salesforce Developer Virtual Intern — May 2025 – Jul 2025

Salesforce, Hyderabad (Remote)

- Completed an 8-week structured Salesforce Developer program covering CRM platform architecture, org configuration, data management, and enterprise security models — building production-ready skills in cloud platforms.
- Developed hands-on projects using Apex programming, Object Relationships, and Lightning Web Components (LWC), gaining practical experience in enterprise-grade CRM customization and workflow automation.
- Earned the Salesforce Agentblazer Champion credential, demonstrating proficiency in agentic AI workflows, automation configuration, and platform deployment — directly aligned with AI-native engineering skills.

KEY PROJECTS

HireLens AI – Explainable AI-Powered Applicant Tracking System
Tech Stack: *React, FastAPI, SQLite, Python, spaCy, sentence-transformers, scikit-learn, SHAP, LIME, REST APIs*

- Architected a full-stack AI recruitment platform with a React frontend and FastAPI backend, delivering an automated pipeline for resume screening, candidate ranking, and side-by-side profile comparison.
- Engineered an Explainable AI (XAI) matching engine using NLP (spaCy, sentence-transformers) and LLM-adjacent techniques (SHAP, LIME) to compute transparent, weighted fit scores — an applied RAG-adjacent document intelligence system.
- Built a multi-format resume parsing pipeline using pdfplumber and python-docx for structured data extraction (skills, experience, education), with scalable RESTful APIs via FastAPI and SQLAlchemy for persistent workflow management.
- Designed prompt-structured outputs and feature engineering pipelines that mirror production AI evaluation patterns: correctness scoring, confidence metrics, and fallback handling for edge-case resume formats.

Chatnslate – Real-Time Multilingual Chat Application
Tech Stack: *Next.js 15, Supabase (PostgreSQL), Gemini 2.5 Flash API, REST APIs, Vercel*

- Engineered a real-time chat platform supporting 20+ languages with AI-powered auto-translation powered by Google Gemini 2.5 Flash API — a production LLM-integrated application handling concurrent multilingual sessions.
- Designed a scalable Supabase (PostgreSQL) backend with JWT-based authentication, optimized queries, and RESTful API architecture — demonstrating cloud-native backend design with real-time data synchronization.
- Owned the full stack from schema design to Vercel deployment, implementing a component-driven UI with real-time message sync — showcasing end-to-end AI-native product delivery.

FitFusion – AI-Driven Fitness Recommendation System
Tech Stack: *Python, Scikit-learn, Random Forest, Pandas, NumPy, Streamlit*

- Built an end-to-end ML pipeline for personalized fitness and diet plan generation using a Random Forest classification model trained on user health parameters, with measurable improvement in recommendation relevance over baseline.
- Applied data preprocessing, feature engineering, and model optimization techniques using Pandas and NumPy; deployed an interactive Streamlit interface enabling non-technical users to access AI-generated fitness plans — bridging ML models with user-facing applications.

EDUCATION

Bachelor of Technology – Computer Science & Engineering (AI & ML) 2022 – 2026
Malla Reddy College of Engineering and Technology | CGPA: 8.51 / 10.0

Intermediate – MPC 2020 – 2022
Impulse Junior College | Percentage: 92.4%

10th Standard (SSC) 2019 – 2020
Vijay High School | CGPA: 10.0 / 10.0

CERTIFICATIONS

- Salesforce Agentblazer Champion – Salesforce (Jul 2025)
- Getting Started with Data Analytics – Microsoft (Jul 2025)
- Generative AI Study Jams – Google Developer Groups on Campus (Oct 2024)
- Solve It with SQL Workshop – Oracle Academy (Jul 2024)
- 30 Days of Python Challenge – CodeDamn (Dec 2023)

ACHIEVEMENTS & COMPETITIVE HIGHLIGHTS

- Ranked AIR ~7,000 among 69,000+ candidates in GATE 2026 – DA paper (Score: 385), demonstrating analytical reasoning and problem-solving at a national competitive level. (Mar 2026)
- Qualified GATE 2025 – Computer Science & IT (Score: 331), reflecting consistent performance across core CS fundamentals. (May 2025)
- Ranked Top 5% nationally in Adobe GenSolve Hackathon (Adobe & GeeksforGeeks) — recognized for algorithmic problem-solving and innovative solution design. (Aug 2024)
- Advanced to Round 2 of Flipkart GRiD 6.0 Software Development Track in a competitive national challenge. (Aug 2024)
- Qualified for CTF Round (Penetration Testing) in Great AppSec Hackathon, demonstrating applied cybersecurity knowledge. (Aug 2024)
